- 1 (a) Cell surface membranes are involved with the movement of substances into and out of cells.

Calcium pumps in cell surface membranes maintain a concentration of calcium ions inside the cytoplasm that is a thousand times lower than outside the cell.

Fig. 1.1 shows the movement of calcium ions across a cell surface membrane.

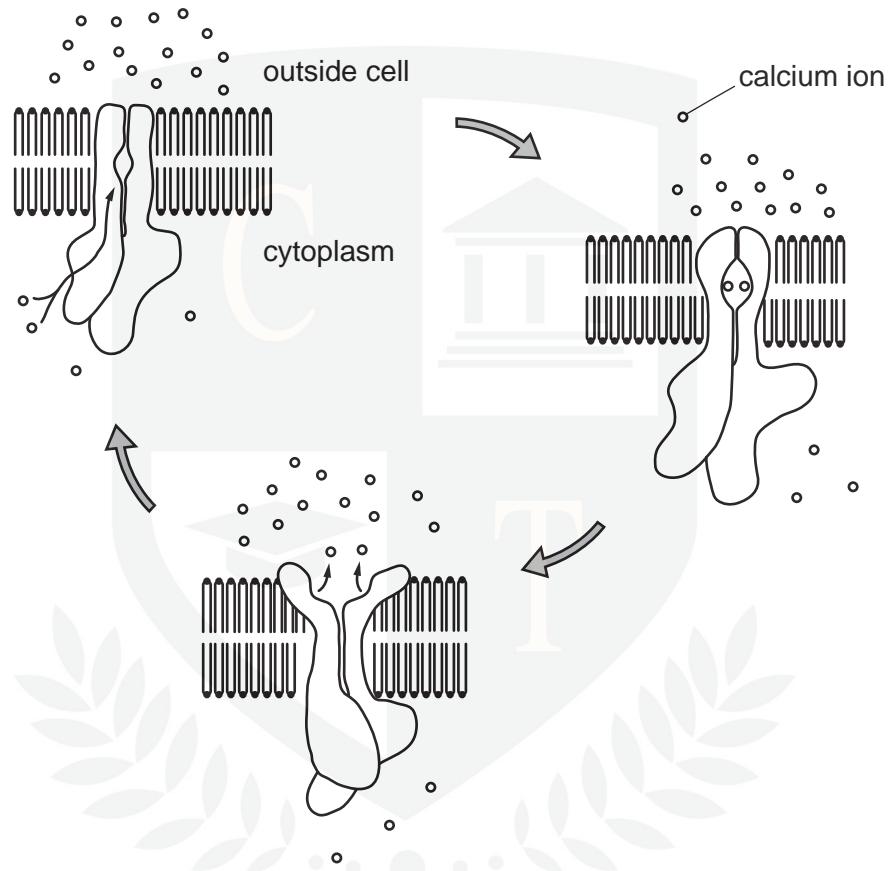

Fig. 1.1

With reference to Fig. 1.1,

- (i) explain why calcium ions do not pass through the phospholipid bilayer;
