Question Paper 3

Level	International A Level	
Subject	Chemistry	
Exam Board	CIE	
Topic	Electrochemistry	
Sub-Topic	Redox	
Paper Type	Theory	
Booklet	Question Paper 3	

Time Allowed: 83 minutes

Score: /69

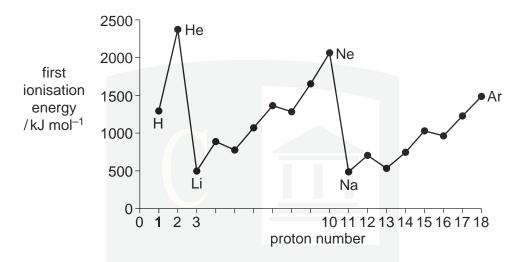

Percentage: /100

Grade Boundaries:

A*	А	В	С	D	E	U
>85%	777.5%	70%	62.5%	57.5%	45%	<45%

1 The Periodic Table we currently use is derived directly from that proposed in 1869 by Mendeleev who had noticed patterns in the physical and chemical properties of the elements he had studied.

The diagram below shows the first ionisation energies of the first 18 elements of the Periodic Table.

[2]
in why sodium has a lower first ionisation energy than magnesium.
in why magnesium has a higher first ionisation energy than aluminium.
<u>IEMISTRY ONLINE</u>
in why helium, He, and neon, Ne, occupy the two highest positions on the am.
in why the first ionisation energy of argon, Ar, is lower than that of neon, is lower than that of helium.
· · · · · · · · · · · · · · · · · · ·

[8]

(c)	(i)	The first ionisation energies of the elements Na to Ar show a variation. Some physical properties show similar variations.
		The atomic radius of the elements decreases from Na to C1.
		Give a brief explanation of this variation.
	(ii)	The cations formed by the elements Na to $\mathrm{A}\mathit{l}$ are smaller than the corresponding atoms.
		Give a brief explanation of this change.
		[3]

(d) The oxides of the elements of the third Period behave differently with NaOH(aq) and HCl (aq). In some cases, no reaction occurs.

Complete the table below by writing a balanced equation for any reaction that occurs, with heating if necessary. If you think no reaction takes place write 'no reaction'.

You do not need to include state symbols in your answers.

MgO(s)	NaOH (aq) →	
MgO(s)	HCl (aq) \rightarrow	
Al ₂ O ₃ (s)	NaOH (aq) + H_2 O (I) \rightarrow	
Al ₂ O ₃ (s)	HC1 (aq) →	
SO ₂ (g) +	NaOH (aq) →	
SO ₂ (g) +	HCℓ (aq) →

2	(a)	The Group IV oxides CO_2 and SiO_2 differ widely in their physical properties. Describes differences and explain them in terms of their structure and bonding.	ibe
			[3]
	(b)	What are the properties of a <i>ceramic</i> material? Why is silicon(IV) oxide very suitable a component of ceramics?	as
			[2]
	(c)	Lead(II) oxide reacts with both acids and bases.	
		(i) What is the name given to oxides that have this property?	
		(ii) Write a balanced equation for the reaction between PbO and NaOH.	
			[2]

- (d) Tin forms an oxide, **A**, that contains the metal in both oxidation states II and IV. The formula of **A** can be found by the following method.
 - A sample of A was dissolved in H₂SO₄(aq), producing solution B, which was a mixture of tin(II) sulfate and tin(IV) sulfate.
 - A 25.0 cm 3 sample of solution **B** was titrated with 0.0200 mol dm $^{-3}$ KMnO $_4$. 13.5 cm 3 of KMnO $_4$ was required to reach the end-point.
 - Another 25.0 cm³ sample of solution B was stirred with an excess of powdered zinc. This converted all the tin into tin(II). The excess of zinc powder was filtered off and the filtrate was titrated with 0.0200 mol dm⁻³ KMnO₄, as before. This time 20.3 cm³ of KMnO₄ was required to reach the end-point.

The equation for the reaction occurring during the titration is as follows.

$$2MnO_4^- + 16H^+ + 5Sn^{2+} \longrightarrow 2Mn^{2+} + 8H_2O + 5Sn^{4+}$$

	$2 V O_4 + O_1 + O_2 + O_3 $
(i)	Write a balanced equation for the reaction between Zn and Sn ⁴⁺ .
(ii)	Use the Data Booklet to calculate the Ee values for the reactions between
	• Zn and Sn ⁴⁺ ,
	MnO ₄ and Sn ²⁺
(iii)	Use the results of the two titrations to calculate
	• the number of moles of Sn ²⁺ in the first titration sample,
	 the number of moles of Sn²⁺ in the second titration sample.
	CHEWIS IN LUNDING
	<u> </u>
(iv)	Use the results of your calculation in (iii) to deduce the Sn ²⁺ /Sn ⁴⁺ ratio in the oxide A , and hence suggest the formula of A .

[8]

(e)	elec	rajor use of tin is to make 'tin plate', which is composed of thin sheets of mild statroplated with tin, for use in the manufacture of food and drinks cans. A tin coating $ imes$ 10 ⁻⁵ m thickness is often used.	
	(i)	Calculate the volume of tin needed to coat a sheet of steel 1.0 m \times 1.0 m to t thickness, on one side only.	:his
	(ii)	Calculate the number of moles of tin that this volume represents. [The density of tin is $7.3\mathrm{g\ cm^{-3}}$.]	
	(iii)	The solution used for electroplating contains Sn ²⁺ ions. Calculate the quantity	 ⁄ of
	` ,	electricity in coulombs needed to deposit the amount of tin you calculated in (ii).

Sulphuric acid, an important industrial chemical, is manufactured from sulphur by the Contact process. There are three consecutive reactions in the Contact process which are essential.
(a) Write a balanced equation (using where appropriate) for each of these reactions in the correct sequence.
1
2
3[4]
(b) What catalyst is used?
[1]
Hydrogen sulphide, H_2S , is a foul-smelling compound found in the gases from volcanoes. Hydrogen sulphide is covalent, melting at $-85^{\circ}C$ and boiling at $-60^{\circ}C$.
(c) (i) Draw a 'dot-and-cross' diagram to show the structure of the H ₂ S molecule.
(ii) Predict the shape of the H ₂ S molecule.
(iii) Oxygen and sulphur are both in Group VI of the Periodic Table.
Suggest why the melting and boiling points of water, H ₂ O, are much higher than those of H ₂ S.
[4]

Sulphur and its compounds are found in volcanoes, in organic matter and in minerals.

4

	roge wate	n sulphide burns with a blue flame in an excess of oxygen to form sulphur dioxide er.
(d)	(i)	Write a balanced equation for the complete combustion of H ₂ S.
	(ii)	What is the change in the oxidation number of sulphur in this reaction?
	()	from to
	(iii)	What volume of oxygen, measured at room temperature and pressure, is required
	()	for the complete combustion of 8.65 g of H ₂ S? Give your answer to two decimal places.
		[5]
	lroge S ^{2–} i	n sulphide is a weak diprotic (dibasic) acid. Its solution in water contains ${\sf HS}^-$ and a ons.
(e)	(i)	What is meant by the term weak acid?
	(ii)	Write an equation, with state symbols, for the first ionisation of H ₂ S when it dissolves in water.
