- instrumental method (e.g. spectrophotometer/colorimeter/conductance meter)
- what is measured (e.g. absorbance/transmission at a stated wavelength or by use of a "suitable" (green) filter or conductance/resistance)
- measurement of time
- relation of time to rate (e.g. gradient of absorbance/time graph, or rate $\propto 1 /$ t)
- repeat with different $\left[\mathrm{Zn}^{2+}\right]$, (but the same $[P A R]$ )
- relation of rate to $\left[\mathrm{Zn}^{2+}\right]$ (either by a plot or by simple proportion)
