PURE MATH ALGEBRA AND FUNCTION

Level & Board	EDEXCEL (A-LEVEL)
TOPIC:	INTEGRATION
PAPER TYPE:	SOLUTION - 5
TOTAL QUESTIONS	8
TOTAL MARKS	26

ChemistryOnlineTuition Ltd reserves the right to take legal action against any individual/ company/organization involved in copyright abuse.

INTEGRATION - 5

1. $\sin 61^0$

Let $y = \sin x$

We take $x = 60^0$

$$\delta x = dx = 61^0 - 60^0 = 1^0 = 0.01745$$

$$y = \sin 60^0 = 0.866$$

Now $y = \sin x$

$$d(y) = d(\sin x)$$

$$dy = \cos x \, dx$$

$$dy = \cos 60^0 (0.01745)$$

$$dy = 0.0087$$

$$\text{Thus } \sin 61^0 \approx y + dy$$

$$= 0.866 + 0.0087$$

$$= 0.8747$$

2. $\int \frac{1-x^2}{1+x^2} dx$

$$= \int \frac{2-1-x^2}{1+x^2} dx$$

$$= \int \frac{2-(1+x^2)}{1+x^2} dx$$

$$= \int \frac{2}{1+x^2} dx - \int \frac{1+x^2}{1+x^2} dx$$

$$= 2 \int \frac{1}{1+x^2} dx - \int 1 dx$$

I am Sorry !!!!

$$= 2\tan^{-1} x - x + c$$

3.

$$\int \sin(a+b)x dx$$

$$= \frac{-\cos(a+b)x}{a+b} dx$$

$$= -\frac{1}{a+b} \cos(a+b)x + c$$

4.

$$= \int \ln x \times \frac{1}{x} dx$$

As $f(x) = \ln x$

And $f'(x) = \frac{1}{x}$, so

Using $\int [f(x)]^n = \frac{[f(x)]^{n+1}}{n+1}$

$$= \frac{(\ln x)^{1+1}}{1+1} + c$$

$$= \frac{(\ln x)^2}{2} + c$$

5.

$$= \int (2x+3)^{1/2} dx$$

\times and \div by 2 to make derivative

$$= \frac{1}{2} \int (2x+3)^{1/2} \cdot 2 dx$$

$$= \frac{1}{2} \cdot \frac{(2x+3)^{1/2+1}}{1/2+1} + c$$

I am Sorry !!!!

$$\begin{aligned}
 &= \frac{1}{2} \cdot \frac{(2x+3)^{3/2}}{3/2} + c \\
 &= \frac{1}{2} \cdot \frac{2}{3} (2x+3)^{3/2} + c \\
 &= \frac{1}{3} (2x+3)^{3/2} + c
 \end{aligned}$$

6.

$$\begin{aligned}
 &= \int \tan^2 x dx \\
 &= \int (\sec^2 x - 1) dx \\
 &= \int (\sec^2 x dx) - \int 1 dx \\
 &= \tan x - x + c
 \end{aligned}$$

7.

$$\begin{aligned}
 &= \int \frac{1}{(2x+3)^4} dx \\
 &= \int (2x+3)^{-4} dx \\
 &= \frac{1}{2} \cdot \frac{(2x+3)^{-4+1}}{-4+1} + c \\
 &= -\frac{1}{6(2x+3)^3} + c
 \end{aligned}$$

8. We know that

$$\frac{d}{dx} [\ln f(x)] = \frac{1}{f(x)} \cdot f'(x)$$

Taking integration on both sides

$$\begin{aligned}
 &\int \frac{d}{dx} [\ln f(x)] dx = \int \frac{1}{f(x)} \cdot f'(x) dx \\
 \Rightarrow \quad &\ln f(x) = \int \frac{f'(x)}{f(x)} dx \\
 \Rightarrow \quad &\int \frac{f'(x)}{f(x)} dx = \ln f(x) + c \quad \text{By definition}
 \end{aligned}$$

I am Sorry !!!!

$$\left(\int f(x) dx \right) = F(x) + c$$

Hence proved.

I am Sorry !!!!
